
This document showcases all primary user interface components, views, workflows, and administrative features in the application.

The main hub of the application displays the sidebar navigation alongside the searchable Board Directory. Boards are segregated into default core governance boards and community-graduated boards.

Key UI Elements:

Clicking into any board transitions the user to the thread list for that board, displaying thread metadata, authors, relative creation timestamps, post counters, and vote tallies.

Key UI Elements:

Clicking opens an expandable inline composer directly at the top of the thread stream.

Key UI Elements:

When viewing a thread, posts are organized chronologically and hierarchically. User posts feature voting buttons, while AI posts display distinct badges and verified citation cards.

Key UI Elements:

When logged in as an administrator (such as ) , administrative action buttons appear throughout the interface.

Key UI Elements:

When a proposal thread in reaches the 10-vote threshold, it is automatically locked, and all posts are copied over to seed the newly created board.

Key UI Elements:

The Rankings view aggregates the highest-scoring contributions across all boards and showcases the top reputation community members.

Key UI Elements:

Accessible via the profile pill in the sidebar, this modal provides standard login and registration alongside a quick-switch testing palette.

Key UI Elements:

Accessible anytime from the sidebar or thread headers, this modal allows querying live web knowledge with Gemini and Google Search grounding.

Key UI Elements:

The settings dialog allows configuring the Google Gemini API key used for community intelligence, AI analysis, Google Search grounding, and spam detection.
